

Recommended Water Disposal

OD 100, B 250-1 R01

⚠ NOTICE Installation must be completed in accordance with all applicable local plumbing codes and regulations. If in doubt, consult a qualified plumber. Check regularly that the drain hose is free of obstacles and that the waste water flows freely. In case of insufficient flow, clean or replace the drain hose (see page 17 of user manual).

Connection to a waste line

Shorten the drain hose (B) according to the position of the waste point. **The hose must not be bent or twisted and must always slope downwards** in order to provide adequate water disposal. Not following this instruction could result in insufficient flow of water which could cause unpleasant odours and damage to the product.

Insert the drain hose into the waste point. If in doubt, consult a qualified plumber.

Connection to a floor drain

The drain hose (B) can be connected to or placed near a floor drain.

Shorten the drain hose according to your needs, **ensuring that the hose is not bent or twisted**. The drain hose must be placed in such a way that it does not create an obstacle for people walking by.

In the case where the drain hose is in the vicinity of a floor drain, as opposed to directly above, or directly connected, it is recommended that the hose end is cut to an angle of 45° to maintain a free flow of water and to prevent blockage. (This type of waste scenario should **ONLY** be used in places where people expect water to be on the floor).

Connection to a water container

The drain hose can be connected to a SuitSpin water container which would be mounted on the wall underneath the dryer (see page 10 of user manual).

The capacity of the water container is 18 litres and it needs to be emptied manually.

After installation of the dryer and water container, shorten the drain hose so that it extends 50-100mm below the top of the water container. Place the drain hose through the hole in the top of the container and **ensure it is not bent or twisted**. The hole within the container will hold the hose in place.

This installation is **ONLY** suitable for walls which will hold a minimum of 50kg hanging weight.
